

TO WHOM IT MAY CONCERN

July 30<sup>th</sup>, 2014

The WZOO engineering department is consistently working on the transmitter being used to drive the W260CG translator currently on the air in Burlington, NC. As stated previously the translator is not operating as its authorize operating power of 250 watts.

Attached are several correspondence with our engineers as to the progress that is being made to correct the situation.

Tom Collins  
General Manager
